

MAGNUM CERAMIC COATING

WHO WE ARE

Proudly Australian, Magnum Ceramic Coating leads surface protection with cutting-edge Obsidian S1+ Graphene and Luminous X Borophene coating.

At Magnum, every coating begins its life in our lab — where our team of material engineers push the limits of surface protection technology. We develop, refine, and stress-test each formula through countless cycles of abrasion, UV exposure, hydrophobicity and chemical resistance.

Most coatings on the market are ceramic-based, using silica dioxide (SiO_2) to create a hard, hydrophobic layer. While effective, ceramic can be prone to micro-cracking and water spotting under heat stress. Our signature **Magnum S1+ Graphene Coating** uses a refined graphene formula, 200 times stronger than steel and used in aerospace applications, to create a flexible, ultra-durable layer that bonds at the molecular level. It offers superior protection against UV rays, chemical etching, and environmental damage, making it ideal for both new and older vehicles. Our **Luminous X Coating**, powered by boron is formulated with amorphous boron, this cutting-edge coating harnesses the strength of boron atoms fused with polysilazane, one of the hardest glass resins available that delivers exceptional hardness, ultra-slick feel, and enhanced thermal resistance.

MAGNUM OBSIDIAN S1+ GRAPHENE COATING

Uses advanced Graphene nanotechnology to bond with your vehicle's paint, resisting harsh chemicals and light marring. Built for Australian conditions with exceptional durability and longevity to deliver 7+ years protection.

MAGNUM LUMINOUS X COATING

Uses boron nano tech to deliver up to 10 years of premium protection with enhanced gloss, slickness, and hydrophobic performance — rugged defence with a luxury finish.

MAGNUM EXTERIOR COATINGS VS. TRADITIONAL COATINGS

Compared to traditional silicon-dioxide ceramic coatings, Magnum paint protection products offer better offering:

- ✓ Increased water beading due to reduced heat absorption
- ✓ Less water spotting due to reduced heat absorption
- ✓ Anti-static properties and less prone to dust build up
- ✓ Superior abrasion resistance

Features	Magnum Obsidian S1+	Magnum Luminous X Borophene Coating	Traditional SiO2 Ceramic Coating
Durability	7 Years	10 Years	2 Years
Maximum Washes	Up to 400 Washes	Up to 500 Washes	Up to 180 Washes
Thickness	1–3 µm thickness	1–3 µm thickness	1–2 µm thickness
Protection			
Abrasion Resistance	High	High	Low
Water Contact Angle	118°	118°-120°	105°
Water Beading	High	Very High	Medium
Water Spotting	Low	Very Low	Medium
Heat Absorption	Low	Low	High
Hardness Rating	SGS 10H	SGS 10H	9H
Gloss Index	High	Very High	Medium

SPECIALISED SURFACES

MAGNUM RIMGUARD PRO CERAMIC COATING

Magnum Alloy Ceramic Coating formula is designed to bond with metal surfaces and provides a protective layered quartz coating that shields your wheels from brake dust that would typically embed onto the surface causing damage and also protects against UV rays that would cause fading and discolouration over time.

MAGNUM GLASS ARMOUR PRO CERAMIC COATING

Magnum Glass Ceramic Coating formula is designed to bond with glass surfaces and provides a protective layered quartz coating that shields your car windows from fine scratches and debris. The coating also provides hydrophobic properties that will provide increased visibility during rainy weather conditions.

MAGNUM LEATHERGUARD PRO CERAMIC COATING

Magnum Interior Ceramic Coating soft formula is designed to bond with leather surfaces and provides your leather interior protection against UV rays, liquid spills, chemicals, scuff marks, ageing and fading. The formula is a ultra-soft silicone coating that restores the leather's original look and feel.

AFTER CARE

THE 'GLOSS BOSS' KIT

Engineered for the ongoing maintenance of your vehicle's exterior, the Gloss Boss Kit preserves surface protection, revitalises gloss, and keeps your ride looking showroom-ready.

WHAT'S INCLUDED?

COSMIC MATTER SNOWFOAM

Infused with SiO2 and authentic Brazilian carnauba wax, this pH neutral snowfoam lifts away contaminants while leaving behind a slick, glossy finish. Designed to maintain hydrophobic performance and deepen shine without stripping existing protection.

60X60CM 1400GSM DRYING TOWEL

This ultra absorbent, heavyweight microfiber towel is built to soak up water fast and reduce friction, ensuring a streak free, touch safe finish every time.

PROFESSIONAL GRADE WASH MITT

Constructed from ultra soft, high pile microfiber to minimise the risk of swirls and marring during contact washes. Gentle on coatings. Tough on grime.

Maintenance kit available for purchase online.
